2 **ABSTRACT**
3

4 Each garment in a set of garment includes a garment match indicator. The garment
5 match indicators comprise a word describing an identifiable characteristic common to the
6 garments in the set and have a color different than the color of the set of garments. Each of the
7 garments in the set is thereby matchable to the other garments by the garment match indicators.
8 Embodiments of the present invention are particularly useful for matching socks in a pair of
9 socks with respect to color, size, ownership, original pairing, and other characteristics.
